

# Wet Blast Phosphating System

# Formation of high quality phosphate film (high adhesion / high coating strength) for antivibration rubber and brake pad metal fittings

A dense and strong granular film crystal is stably formed because phosphating treatment is performed immediately after wet blasting degreases, cleans and activates the surface to a high level.

# Integration and automation of pretreatment and phosphating treatment processes

Conventionally divided processes can be compactly integrated, realizing space and labor savings.

### Cost reduction, environmental friendliness

The proprietary phosphating system reduces chemical usage, water supply and drainage, and the minimized dust generation and completely covered phosphate tank provide a good working environment.

### **Process Outline**

BL-740TH

Installation area: about 42'8"×18'5"×12'10'

Processing time: 100 s / batch

2 Degreasing

Work entry

### Wet blast effect and benefits

### Processing principle

Wet blasting is a technique of spraying a mixture of water and abrasives at high speed with compressed air to clean, process and refine the surface. The wet treatment process has high performance in terms of forming finely roughened surfaces because of high detergency and the ability to use fine abrasives.

#### Wet blast / phosphate coating film

Work discharge

Work chute

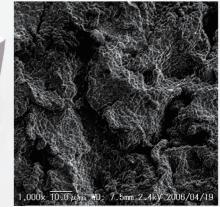

By transferring only the work, the proprietary transfer method reduces liquid removal and limits the consumption of phosphate liquid

realizing treatment in a short time with no unevenness

7 Drying

6 Water / hot rinse

5 Phosphating treatment

etc., for antivibration rubber parts. Phosphate coating after bending test

A dense and uniform phosphate film is

off, it is excellent in adhesive strength,

corrosion resistance, drawability, and is

difficult to peel off even in bending tests, contributing to improvement of drawing ratio,

formed using wet blast pre-processing. Since

the film is a dense crystal that is hard to peel

Coating weight: 1 to 3 g /  $m^2$ , Crystal size: 1 to 3  $\mu m$
